Schematic Flow Diagram:

For each major activity in which wastewater is or will be generated, provide a diagram of the flow of materials, products, water and wastewater from the start of the activity to its completion, showing all unit processes. Indicate which processes use water and which generate waste streams. Include the average daily volume and maximum daily volume of each wastestream (new facilities may estimate). If estimates are used for flow data please indicate they are estimates.

PART 6 – WASTEWATER CHARACTERISTICS

APPLICANT BUSINESS NAME:	Waste Stream No.
---------------------------------	-------------------------

Wastewater characteristics should be provided for each separate process wastestream (i.e. not sanitary sewage). Tables may be duplicated for multiple waste streams. For each set of tables, the waste stream should be identified by a number keyed back to process schematic. All current industrial users are required to submit monitoring data on all pollutants that are regulated specific to each process. For unregulated pollutants, indicate whether the pollutant is present (P) or suspected to be present (SP), absent (A) or suspected to be absent (SA) in the column labeled "Average".

New dischargers should use the table to indicate what pollutants will be present or are suspected to be present in proposed waste streams.

CONVENTIONAL POLLUTANTS AND WASTEWATER CHARACTERISTICS
